HAMZA LACHKAR

BACKEND DEVELOPER · KUBERNETES, OPENSTACK, PYTHON

Meknes, Morocco · ha.lachqar@gmail.com · hlachkar.mooo.com · linkedin.com/in/hamza-lachqar · github.com/buflallo

Backend developer who built the PaaS, managed databases, networking, S3 storage and IAM services of **AZUL Cloud**, the sovereign cloud of Mohammed VI Polytechnic University, opened to public beta in June 2026. I build Python control planes on Kubernetes and OpenStack. I design the system and write the decisions down; coding agents help me write the code.

EXPERIENCE

AZUL Cloud · College of Computing, Mohammed VI Polytechnic University (UM6P), Benguerir

Backend developer

Nov 2025 – Oct 2026

- Built 5 of the platform's services on a five-person team: **PaaS**, **managed databases**, **networking**, **S3 storage** and **IAM**.
- Proposed and built the move from app hosting to **CI/CD**: Helm templates rendered by the Django control plane, deployed through Argo CD, with Celery carrying releases and events across restarts.
- Built **managed databases**: PostgreSQL on CloudNativePG and MongoDB on Percona, with provisioning, storage resize, scaling, hibernate and resume, and teardown. Tenant networks on Cilium policies.
- Built **S3 object storage** on OpenStack Swift: buckets, per-project S3 credentials and signed temporary URLs.
- Designed and built the **IAM service** from scratch: organizations, invitations, membership, one authorize API on OPA, and per-organization provider credentials in Vault. It mirrors Kubernetes RBAC and OpenStack roles, so tenants share resources without extra load on the infrastructure.
- Redesigned **tenant onboarding**: replaced the saga with an activation coordinator that has IaaS set up the OpenStack side and PaaS the Kubernetes side, tracked through one set of activation states.
- Built the team's **central documentation**: a scheduled GitLab job publishes every repository's docs in one place. Wrote 22 architecture decision records.

Backend intern

Nov 2024 – Jul 2025

- Built the platform's first version: apps from source to running on Kubernetes (deployments, services, Traefik ingress), kpack buildpack builds, build and runtime logs, and a web terminal into each app.

EDUCATION

1337 Coding School (42 network)

2021 – 2024, Jun – Oct 2025

- Inception-of-Things (K3s, K3d, Argo CD), Cloud-1 (Ansible), Cybersecurity piscine, Minishell, Webserv, cub3D, ft_transcendence.

Bachelor's degree, Mathematics, Computer Science and Physics (MIP)

2021

Faculty of Sciences and Techniques (FST), Fès

SKILLS

Backend	Python, Django, DRF, Celery, PostgreSQL, Redis, RabbitMQ
Platform	Kubernetes (RKE2), OpenStack, Argo CD, Helm, kpack, Cilium, Vault, Keycloak, OPA
Design	Bounded contexts, reconcile loops, idempotent APIs, transactional outbox, ADRs
Also	React, TypeScript, Vue, Ansible, GitLab CI, C
Languages	Arabic (native) · English (professional, B2) · French (professional, B2)
